Office Action Summary

Art Unit: 1773

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 17-28, 47, drawn to a magnetic recording media, classified in class 428, subclass 694tc.
- II. Claims 38-46, drawn to an apparatus, classified in class 428, subclass 408.
- III. Claims 29-37, drawn to an ion beam apparatus, classified in class 315, subclass 111.21+.

The inventions are distinct, each from the other because:

Inventions II and I are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a protective coating for machine tool bits and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Inventions III and I or III and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that

Art Unit: 1773

the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the apparatus may be used for making a different product such as a coating of an element or compound other than carbon.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stevan A. Resan whose telephone number is (703) 308-4287. The examiner can normally be reached on Tues-Fri from 7:30 to 6:00.
